Compared ORF (open reading free) 1-4334, and sequences ABM75054ABM79587 represent cDNAs encoding them. The invention also encompasses
DAN79587 represent cDNAs encoding them. The invention also encompasses
DAN79587 represent cDNAs encoding them. The invention also encompasses
DAN79587 represent cDNAs encoding them. The invention also encompasses
CC feetred to as ORFX proteins, polymucleotides at least 85% identical to
DAN79587 nucleic acid sequences, vectors and host cells comprising ORFX
DAN79587 nucleic acid sequences, vectors and host cells comprising ORFX
DAN79587 nucleic acid sequences, vectors and host cells comprising ORFX
DAN79587 nucleic acid sequences, vectors and host cells comprising ORFX
DAN79587 compression or company of ORFX proteins, antibods of screening individuals for a predisposition or compression or compression activities, such as cytokine, cell proliferation, company of screening individuals for a predisposition to an CC ORFX-associated disorder. The ORFX proteins of the invention have a wide range of biological activity, hamome medulation, nammatopolesis regulation, coll differentiation, immune medulation, intended the certivity, coll disposition activity, coll and may also be involved in the determination of bodily characteristics, fertility and behaviour. ORFX proteins, or bodily characteristics, fertility and behaviour. ORFX proteins, colliferative disorders such as poriasis and benign tumours, colliferative disorders such as poriasis and benign tumours, colliferative disorders such as poriasis and Alabeimer's disease, and infectious diseases caused by viral, bacterial, characterial, and other proliferative minions of the produce transgenic animals of promoters of primers and probes, in the detection of ORFX genomic sequences or transcripts in the identification and cloning of homologous currence of primers and probes, in the detection of produce transgenic animals any additionally be used to produce transgenic animals and animals and inference of primers and infection and inference cardiovascular disease; immune system disorder; organ transplantation; itsue growth disorder; tissue regeneration disorder; diabetes mellitus; hypothyroidism; cholesterol ester storage disease; infection; vulnerary; vasotropic; antipsoriatic; antidiabetic; cytostatic; nootropic; enteroprotective; antidentoscalerotic; anticoaquiant; thrombolytic; cardiant; hypotensive; antithyroid; antiinflammatory; immunomodulator; dermatological; analgesic; virucide; antibacterial; fungicide. Novel human polypeptides and polynucleotides useful for diagnosing, preventing and treating cardiovascular disease, neurodegenerative, hyperproliferative disorders and disorders related to organ Sequences ABP31028-ABP35561 represent 4534 novel human proteins Claim 10; Page 1545; 2508pp; English. 24-MAY-2001; 2001WO-US017076. 24-MAY-2000; 2000US-0206690P.                                                                                                                                                                                                                                                                                                                                                                                                           brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system epilepses such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of the probes of the invention
                                                                                                                             Human; brain expressed exon; gene expression analysis; probe; microarxay; Alzheimer's disease; multiple sclerosis; schizophrenia; epilepsy; cancer.
                                                                                                            Human brain expressed single exon probe encoded protein SEQ ID NO: 29307.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ند.

The invention relates to a single exon nucleic acid probe (SENP) (I) for measuring human gene expression in a sample derived from human adult liver, compitaing one of 13109 defined nucleotide sequences given in the specification (or complements/ fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is associated with coronary heart disease. Asc1340. Asc59590 represent human liver single exon encoded peptides of the invention. Note: The sequence information for this patent does not appear in the printed specification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human adult liver.

                                                                                                  ò
                                                                                                                                                    셤
                                                                                                                                                                                                                                                                                                                 Thrention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, methods of detecting the nucleotides or nucleotides or antibodies against the polypeptides, methods of detecting the nucleotides or polypeptides in a sample, and methods of identifying compounds which bind to polypeptides of the invention. Although novel, many of the polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention may chave various activities; including cytokine, cell proliferation or cell differentiation activities; including cytokine, cell proliferation or cell municomodulatory activity; activin- or inhibin-related activities; chromolyric activities; haemostatic, thrombotic or thrombolyric activities; reaceptor or ligand activities; or metastasis.

CC chemotactic or chemokinetic activities; haemostatic, thrombotic or thrombolyric activities; reaceptor or ligand activities; or metastasis.

CC thrombolyric activities; receptor or ligand activities; or metastasis.

CC the invention are useful for preventing or metastasis.

CC conditions, e.g., by protein or gene therapy. Such conditions include cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell disorders (e.g., myeloid or lymphoid cell cancers), chronic inflammatory conditions (e.g., acthoric inflammatory conditions (e.g., myeloid or lymphoid cell carcatic erconding them) may be used to promote wound tracial infections in addition to immune disorders (e.g., of burns, incisions and ulcers), while those with toward for unclaid activity may be used in cell cultures to summart or real growth. For example, such polypeptides may be used to neuroeppthelial and the manipulate stem cells in culture to give prese to neuroeppthelial and event or real preserved to neuroeppthelial and promote cell growth. For example,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               that can be used to augment or replace cells damaged by illness, autoimmune disease or accidental damage. The polypeptides and nucleotides may also be used in the diagnosis of the above conditions, and in drug
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human proteins and DNA encoding sequences useful for preventing, treating or ameliorating a medical condition in a mammalian subject e.g. arthritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08225-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a
                   atherosclerosis; coronary heart disease; arterial ischaemia; bone disorder; osteoporosis; vascular growth disorder; tissue regeneration; wound healing; infection; immune disorder; cell culture; drug screening; gene therapy; antinflammatory; antisarthritic; haemostatic; antiarteriosclerotic; cytostatic; osteopathic; vasotropic; cardiant; virucide; antibacterial; antifungal; vulnerary; antiuloer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      screening techniques. The present sequence represents a novel human polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             100.0%; Score 25; DB 4; Length 96;

for processome analysis. Disorders that can be treated include cell proliferative disorders, e.g., arteriosclerosis and cancer, neurological disorders, e.g., Huntington's disease and Parkinson's disease, cardiovascular disorders, e.g., atherosclerosis and congestive heart failure, gastrointestinal disorders, e.g., acquired immunodeficiency syndrome (AIDS) and anaemia, metabolic disorders, e.g., diabetes and obesity and viral infections. Nucleic acids that encode GCREC are used for identifying agents that alter its expression, for assessing toxicity of test compounds, and as sources of primers and probes for diagnostic.
                                                                                                                                                                                                                                                                                                                          sequences. They can also be used in gene therapy, for chromosomal mapping, and for recombinant production of GCREC. The antibodies are useful for diagnosis and monitoring of diseases associated with GCREC expression, for detecting and purifying GCREC, and as therapeutic agents
modulators. They can also be used for generating specific antibodies and
                                                                                                                                                                                                                                                                                                                                                                                                                                       and for drug screening

The present sequence is an olfactory receptor which is encoded by one of a number of novel polynucleotides. The polynucleotides can be used in screening for olfactory agonists and antagonists. The methods allow for the determination of primary scents and the identification of the odour receptors used to detect these primary scents. The methods also enable determination of secondary scents and the identification of combinations of odour receptors that are involved in detecting such secondary scents of odour receptors the construction of a scent representation (also called scent fine enables the construction of a scent representation (also called a scent fingerprint or scent profile), which may be used to re-create and edit scents. Libraries of olfactory receptors are useful for determining the interaction pattern of a composition with the receptors, and can be used for determining differences in the olfactory faculties of different

The present sequence is a polypeptide encoded by one of 344 newly mined human genee. It was used as a query sequence in a database search of olfactory receptor (OR)-like sequences. The invention relates to isolated polymucleotides encoding polypeptides involved in olfactory sensation. The polymucleotides can be used in screening for olfactory agonists and antagonists. The methods allow for the determination of primary scents and the identification of the odour receptors used to detect these

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromesome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed corpus (II) as useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a cupylepptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forgenetic disorders or other traits to assess bloidversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in

The invention relates to an isolated nucleic acid derived from Enterococcus faecium encoding an Enterococcus faecium polypeptide having one of 10 fully defined sequences given in the (or comprising 40 sequential nucleotides chosen from any of the nucleic acids, its complement or sequences hybridising to it). Also included are a recombinant vector comprising the nucleic acid operably linked to transcription regulatory element, a cell comprising the vector and a single-stranded probe comprising the nucleic acid operably linked to chosen from 364 disclosed sequences encoding 3654 disclosed proteins. The nucleic acids is useful for diagnosing pathological conditions resulting from E. faecium bacterial infection (e.g. urinary tract infection) bacteraemia, endocarditis, wounds and abdominal pelvic infection) and for screening drugs such as agonists and antagonists. The nucleic acid is useful for recombinant production of Candida albicans derived peptides or antisense polypeptides. Pharmaceutical compositions and vaccines containing the nucleic acid are useful for preventing or treating Enterococcus faccine infections. The present sequence represents

The invention relates to a novel G-protein-coupled receptor up-regulated in prostate cancer, termed PHOR-1. The encoding cDNA is contained in plasmid designated plothsAll deposited with ATCC as Accession No.PTA-312. PHOR-1 polypeptides and polymucleotides are useful for diagnosing the presence of cancer, especially prostate, kidney, uterine, cervical, stomach or rectal cancer by determining and comparing the level of the protein or mRNA expression in test and mormal tissue samples. Pharmaceutical compositions comprising PHOR-1 is useful for treating cancer. PHOR-1 proteins are useful for identifying ligands and other segents and cellular constituents that binds to PHOR-1 gene product and for generating antibodies which are useful in diagnostic, prognostic and imaging methodologies and for the treatment of prostate cancer. Cell lines expressing PHOR-1 are useful for identifying protein-protein. interactions mediated by PHOR-1. The present sequence represents the amino acid sequence of AI138218, a PHOR-1 family member

WPI; 2003-354597/33. N-PSDB; ACC59964.

New human protein modification and maintenance molecules (PMMM), useful for diagnosing, treating and preventing diseases or conditions associated with the aberrant PMMM expression e.g. cancer, AIDS, epilepsy, or infections.

Claim 1; Page 213-214; 270pp; English.

ACC59959 to ACC59989 encode the human protein modification and maintenance molecule proteins given in ABR43240 to ABR43270, designated remaintenance molecule proteins given in ABR43240 to ABR43270, designated PMM-11 (1). (1) have cytostatic, antiatioscritical matriconvulsant, nootropic, neuroprotective, carboroprotective, anti-HIV, antiallergic, antinflammatory and thyromimetic activities, and can be useful in gene therapy. The PWMM polypeptides and polymucleotides are useful in diagnosing, treating apprehension or overexpression of PMMM, such as sociated with the decreased expression or overexpression of PMMM, such as call proliferative (e.g. cancer, atherosclerosis), neurological (e.g. epilepsy, Huntington's disease, stroke), immune/inflammatory (e.g. AIDS, allergies) and developmental (e.g. hypothyroidism, Cushing's syndrome) cisorders, or infections. They are also useful in assessing the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of PMMM. The PMMMs or their fragments are useful in screening compounds for effectiveness as agonist or antagonist of the polypeptides, or in altering the expression of the target polymucleotide and compounds that specifically bind to or modulate the activity of the polypeptide. The microarray is useful in monitoring or measuring protein-protein

```
The present sequence represents a Monkey antibody light chain linked to a theavy chain. The antibody binds to a target structure displayed in and on the cell surface of human gastrointestinal epithelial tumour cells and in a subpopulation of normal human gastrointestinal epithelial cells. The target structure especially comprises alpha6beta4 integrin. This is a tumour-associated antigen. The antibody, and its fragments, are useful for treating conditions based on anti-angiogenic mechanism in humans. They are useful for treating human metastatic and malignant disease, for in vitro, in vivo diagnosis and prognosis of human malignant disease, comprising tumour typing, tumour screening, tumour diagnosis and monitoring premallignant conditions. Quantitative in vivo diagnosis is carried out by determining the localization of antibody to
                                                                                                                                                                                                                    5; Conservative

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention describes an isolated G protein coupled receptor X (GPCRI-
12) polypeptide, especially an olfactory receptor. GPCRX polypeptides are
12) useful for identifying an agent that binds to the polypeptide and for
13 identifying a candidate substance or ligand molecules interacting with an
14 confectory receptor polypeptide. The polypeptide, (I) and (II) are also
15 consciolated and diseases and disorders related to cell signal
16 processing and metabolic pathway modulation e.g. cardiomyopathy,
17 catheroscierosis and diabetes, and developmental diseases, immune
17 corriconeurogenic disease, signal transduction pathway disorders,
18 corriconeurogenic disease, pain, cancer, Parkinson's disease, acute
18 corriconeurogenic disease, pain, cancer, Parkinson's disease, acute
18 corriconeurogenic disease, pain, cancer, Parkinson's disease, ulcers,
19 corriconeurogenic disorders, genetic disorders,
10 cheart failure, urinary retention, osteoporosis, Crohn's disease, ulcers,
20 clertility, Panorealtiis, Hyperthyroidism and Endometriosis GPCRX
21 certility, Panorealtiis, Hyperthyroidism and Endometriosis GPCRX
22 certility, panorealtiis, Hyperthyroidism and Endometriosis GPCRX
23 considers are also useful for identifying a cell or tissue type in a
23 biology. Cells comprising (I) are useful for producing non-human
23 cranspanic animals for studying the function and/or activity of GPCRX
24 protein and for identifying and/or evaluating modulators of GPCRX
25 protein and for identifying and/or evaluating modulators of GPCRX
27 receptor described in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

This invention describes novel polynucleotides isolated from Ashbya gossypii (also known as Eremothecium gossypii), that encode a protein associated with construction of the cell wall and/or cytoskeleton. Modulating the construction of the cell wall cytoskeleton, especially such that the cells are stabilised, improves microbial production of Vitamin B2, a human and animal food supplement. This sequence represents a fragment of Oligo 103 which encodes an A. gossypii cell wall/cytoskeleton associated protein.Oligo 103 encodes a homologue of a Saccharomyces cerevisiae actin overexpression associated protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New polynucleotide from Ashbya gossypii, useful for increasing microbial production of Vitamin B2, encodes protein involved in construction of cell wall and cytoskeleton.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Metalloprotease; 65649; astacin; proteolytic; gene therapy; apoptosis; metastasis; wound healing; endometrial cycling; tumour cell invasion; bone eremodelling; neurological; cardiovascular; endothelial; cytostatic; immune; bone metabolism; neuroprotective; nootropic; immunosuppressive;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              요
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to novel human nucleic acid molecules that encode a metalloprotease family member designated the 65649 protein. The 65649 cativate growth factors, degrade polypepides and process extracellular proteins. Typically requiring zinc for catalysis, this enzyme can be used for drug screening, chromosome mapping, tissue typing and in forensis. Collogy. Furthermore, gene therapy using the 65649 molecules may be used to modulate tumour cell invasion, metastasis, tissue or organ integrity, wound healing, endometrial revoling, hair follicle cycling, bone remodelling, ovulation, embryonic development, and apoptosis. These may further be used to control or prevent e.g. cellular proliferative and/or differentiative disorders, as well as neurological, cardiovascular, endochelial and immune disorders, and bone metabolism disorders. Compositions of 65649 can therefore be described as cytostatic, reuroprotective, nootropic and immunosuppressive. The nucleic acids, proteins, and antibodies of the invention are useful in screening assays, proteins, and antibodies of the invention are useful in screening assays, proteins we medicine, and in therapeutic and prophylactic treatment. This polypeptide sequence is the human 65649 metalloprotease of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                     New human metalloprotease, 65649, polypeptides and polynucleotides, useful for modulating e.g. tumor cell invasion or metastasis, tissue or organ integrity, wound healing, endometrial cycling, hair follicle cycling, or ovulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

This invention describes novel polynuclectides isolated from Ashbya gossypii (also known as Eremothecium gossypii), that encode a protein associated with construction of the cell wall and/or cytoskeleton. Modulating the construction of the cell wall/cytoskeleton, especially such that the cells are stabilised, improves microbial production of Vitamin B2, a human and animal food supplement. This sequence represents an A. gossypii cell wall/cytoskeleton associated protein encoded by Oligo overexpression associated protein.
                                                                                                                                                                                                                                                                                                                                                                                                                         New polynucleotide from Ashbya gossypii, useful for increasing microbial production of Vitamin B2, encodes protein involved in construction of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human, protease peptide, structural protein, extracellular reticulum, transgenic, gene therapy, enzyme.

                                                                                           The invention relates to an isolated human protease peptide. The peptide cleaves structural proteins in the extracellular reticulum. The encoding nucleic acids are useful as primers and probes e.g. in detection assays and in the polymerase chain reaction, genotyping, antisense therapy, and gene therapy. They are also used in recombinant vectors, expressing the protease peptide, and constructing recombinant cells and animals. Vectors comprising the nucleic acids are used to transform a host cell which can modulators are useful for treating a disease or condition mediated by a human protease protein. The protease peptide, antibodies and human protease protein. The present sequence represents the human protease protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  20. 30
/note= "Prokaryotic membrane lipoprotein lipid attachment
An isolated human protease peptide, for identifying modulators of its function to treat diseases and conditions mediated by protease activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; secreted protein; therapeutic; drug screening; immune response; pharmacogenomic analysis; tissue typing; gene therapy.

Sequences of the invention are useful as models for the development of human therapeutic compositions, aid in the development of therapeutic proteins and serve as targets for the development of human therapeutic agents. The peptides may be used in the screening assays, in assays to determine the biological activity of the protein, as markers for tissues in which the corresponding protein is preferentially expressed, to raise antibodies or to elicit another immune biological fluids. The secreted peptides are also useful for diagnosing a disease, predisposition to a disease or treating a disorder characterised by an absence of, inappropriate or unwanted expression of the protein. The antibodies are useful in pharmacogenomic analysis, for inhibiting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ಹ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            protein function or for tissue typing. Sequences of the invention are also useful in gene therapy. The present sequence is human secreted .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

The present sequence is human G-protein coupled receptor-11 (GPCR-11) protein. GPCR protein and DNA may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate CPCRX expression, obesity, diabetes mellitus, anorexia, cadhexia, cardiomyopathy, pain, atherosclerosis, neurodegenerative disorders (Alzheimer's disease, Parkinson's disease, Huntington's disease); bulimia, immune disorder, haematopoietic disorders, disorders related to cell signal processing and metabolic pathway modulation, retinal disorder (photoreception), bacterial, fungal, protozoal and viral infections (HIV); cancer (neoplasm adenocarcinoma); angina pectoris, hypotension, hypotrension, asthma, Crohn's disease, multiple sclerosis, ulcers, neurological disorders (dementia, mental retardation, schizophrenia, anxiety); acute heart failure, osteoporosis, myocardial infarction and urinary retention
                                                                                                                                          atherosclerosis; diabetes; cardiant; cytostatic; cancer; obesity; pain; diabetes mellitus; anorexia; cachexia; cardiomyopathy; atherosclerosis; neurodegenerative disorder; Alzheimer's disease; Parkinson's disease; immune disorder; haematopoietic disorders; retinal disorder; HIV; human immunodeficiency virus; adenocarcinoma; bulimia; asthma; ulcer; angine sectoris; hypertension; hypertension; Crohn's disease; anxiety; multiple sclerosis; schizophrenia; dementia; mental retardation; egene therapy; osteoporosis; urinary retention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is an olfactory receptor which is encoded by one of a number of novel polynucleotides. The polynucleotides can be used in screening for olfactory agonists and antagonists. The methods allow for the determination of primary scents and the identification of the odour receptors used to detect these primary scents. The methods also enable determination of secondary scents and the identification of combinations of odour receptors that are involved in detecting such secondary scents. This enables the construction of a scent representation (also called a scent fingerprint or scent profile), which may be used to re-create and edit scents. Libraries of olfactory receptors are useful for determining the interaction pattern of a composition with the receptors, and can be used for determining differences in the olfactory faculties of different

The present sequence is human G-protein coupled receptor-12 (GPCR-12) protein. GPCR protein and DNA may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate GPCRX expression, obesity, diabetes mellitus, anorexia, cachexia, cardiomyopathy, pain, atherosclerosis, neurodegenerative disorders (Alzheimer's disease, Parkinson's disease, Huntington's disease); bulimia, immune disorder, haematopoietic disorders, disorders related to cell signal processing and metabolic pathway modulation, retinal disorder (photoreception), bacterial, fungal, protozoal and viral infections (HIV); cancer (neoplasm adenocarcinoma); angina pectoris, hypotension, hypertension, asthma, Crohn's disease, multiple sclerosis, ulcers, neurological disorders (dementia, mental retardation, schizophrenia, anxiety); acute heart failure, osteoporosis, myocardial infarction and urinary retention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                             G-Protein coupled receptor polypeptides and NAs useful for preventing, diagnosing and treating cardiomyopathy, atherosclerosis, cancers and diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human, olfactory receptor; OR; primary scent determination; secondary scent determination; polypeptide library; odour receptor; scent profile; scent fingerprint; scent representation.

New polynucleotides which encode polypeptides involved in olfactory

ö

```
The present sequence is an olfactory receptor which is encoded by one of a number of novel polynucleotides. The polynucleotides can be used in screening for olfactory agonists and antagonists. The methods allow for the determination of primary scents and the identification of the odour receptors used to detect these primary scents. The methods also enable determination of secondary scents and the identification of combinations of odour receptors that are involved in detecting such secondary scents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 11; Page 970-971; 1857pp; English.

                                                                                                                                               The present sequence is an olfactory receptor which is encoded by one of a number of novel polynucleotides. The polynucleotides can be used in screening for olfactory agonists and antagonists. The methods allow for the determination of primary scents and the identification of the odour receptors used to detect these primary scents. The methods also enable determination of secondary scents and the identification of combinations of odour receptors that are involved in detecting such secondary scents. This enables the construction of a scent representation (also called a scent fingerprint or scent profile), which may be used to re-create and edit scents. Libraries of olfactory receptors are useful for determining the interaction pattern of a composition with the receptors, and can be used for determining differences in the olfactory faculties of different
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; olfactory receptor; OR; primary scent determination; secondary scent determination; polypeptide library; odour receptor; scent profile; scent fingerprint; scent representation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human, G-protein coupled receptor-4; GCREC-4; cytostatic; hepatotropic; virucide; antiinflammatory; anticonvulsant; antiemetic; neuroprotective; notroproje; cerebroprocective, hypotensive; transpantiliser; vulnerary; ophthalmological; cell proliferative disorder; actinic keratosis; anorectic; arteriosclerosis; atherosclerosis; cirrhosis; hepatitis; psoriasis; cancer; neurological disorder; stroke; Alzheimer's disease; Huntington's disease; parkinson's disease; cardiovascular disorder; epilepsy; hypertension; varicose vein; vasculitis; dysphagia; dyspesia; anorexia; gastrointestinal disorder; pancreatitis; autoimmune disorder; Addison's disease; crohn's disease; acquired immune deficiency syndrome; AIDS; uveitis; infection; transgenic animal; gene therapy.
This enables the construction of a scent representation (also called a scent fingerprint or scent profile), which may be used to re-create and edit scents. Libraries of olfactory receptors are useful for determining the interaction pattern of a composition with the receptors, and can be used for determining differences in the olfactory faculties of different
                                                                                                                                                                                        Gaps

The present sequence is human G-protein coupled receptor-4 (GCREC-4)

protein. The present invention relates to GCREC protein and nucleic acids

cc encoding them. GCREC protein, its agonist or antagonist are useful for

treating diseases or conditions associated with decreased expression or

cc reating diseases or conditions associated with decreased expression or

cc encerpression of functional GCREC in a patient, where the disorder is

selected from cell proliferative disorders such as actinic keratosis,

cancer, neurological disorders such as epilepsy, stroke, Alzheimer's

cc ancer, neurological disorders such as epilepsy, stroke, Alzheimer's

cd disease, Huntington's disease, Parkinson's disease, cardiovascular

cd disorders such as dysphadia, dyspepsia, anorexia, nausea,

cl intestinal disorders such as dysphadia, dyspepsia, anorexia, nausea,

cc intestinal disorders such as dysphadia, dyspepsia, anorexia, nausea,

cc intestinal disorders such as dysphadia, dyspepsia, anorexia, nausea,

cc intestinal disorders such as dysphadia, dyspepsia, anorexia, nausea,

cc intections, trauma and metabolic disorders such as disease,

cuvetitis, viral, bacterial, fungal, parasitic, protozoal, helminthic

contections, trauma and metabolic disorders such as diabetes, obesity,

categorosis. GCREC proteins and their cDNAs are used to assesse the

cf fects of exogenous compounds on the expression of GCREC sequence.

cc fransgenic animals (mice or rate) to model human disease, for therapputic

cr transgenic animals (mice or rate) to model human disease, for therapputic

cr transgenic animals (mice or rate) to model human disease, for therapputic

cor diagnostic purposes, for somatic or germinally occurring genomic

cc sequence, and in molecular biological techniques
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; olfactory receptor; G protein-coupled receptor; GPCR; odourant;

Nucleic acids encoding human olfactory G protein-coupled receptors,

```
ö
useful for screening for compounds involved in olfactory sensation, where the compounds can be used in the food, pharmaceutical and cosmetic industries to customize odors.
                                                                                                                         The invention relates to nucleic acids encoding human olfactory receptors, OR, (a G protein-coupled receptor, GPCR). The OR's specifically recognise molecules, odourants, that elicit specific olfactory sensation. The human olfactory receptors and polynucleotides encoding them are useful for screening a library of chemical compounds for compounds that are involved in olfactory sensation. Modulators of their activity are useful for pharmacological and genetic modulation of olfactory signalling pathways. Therefore, they can be used in the food, pharmaceutical and cosmetic industries to customise odours and fragrances. The present sequence is a human olfactory receptor of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                g
                                                    Sequence 2, Application US/10224414

Sequence 2, Application US/10224414

Patent No. 6638751

GENERAL INPORMATION:

APPLICANT: Elsanya

TITLE OF INVENTION: ISOLATED HUMAN PROTEASE PROTEINS, AND

TITLE OF INVENTION: USES THEREOF

TITLE OF INVENTION: USES THEREOF

FILE REPREBENCE: CLOO0757 DIV

CURRENT PILING DATE: 2002-08-21

PRIOR APPLICATION NUMBER: 60/226,903

PRIOR PILING DATE: 2001-08-23

PRIOR PILING DATE: 2001-08-23

NUMBER OF SEQ ID NOS: 4

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 2

LENGTH: 300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 12736, Application US/09489039A

Patent No. 6610836
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA
TITLE OF INVENTION: PNEUMONIAE FOR DIAGNOSTICS AND THERAPEUTICS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 4515, Application US/09134000C
Patent No. 6617156
GENERAL INFORMATION:
APPLICANT: Lynn Doucette-Stamm et al
TITLE OF INVENTION: NUCLBIC ACID AND AMINO ACID SEQUENCES RELATING TO
TITLE OF INVENTION: ENTEROCOCCUS FAECALIS FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 032796-032

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           셤
Patent No. 6562958

GENERAL INFORMATION:

PAPLICANT: Gary L. Breton et al.

TITLE OF INVENTION: MUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER

TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT APPLICATION NUMBER: US/09/328,352

CURRENT APPLICATION NUMBER: US/09/328,352

CURRENT FILING DATE: 1999-06-04

NUMBER OF SEQ ID NOS: 8252

SEQ ID NOS: 9688

LENGTH: 201
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 4307, Application US/09328352

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
molybdenum transport ATP-binding protein ModC STY0816 [imported] - Salmonella enterica serovar Typhi
A,Note: this species has also been called Salmonella typhi
C;Species: Salmonella enterica subsp. enterica serovar Typhi
C;Bate: 09-Nov-2001 #sequence_revision 09-Nov-2001 #text_change 18-Nov-2002
C;Accession: AE0595
R;Parkhill, J; Dougan, G; James, K.D; Thomson, N.R.; Pickard, D; Wain, J; Churcher, th, T; Connerton, P; Croni, A: Davis, P; Davies, R.M.; Dowd, L; White, N.; Farrar, S.; Moule, S; O'Gaora, P; Croni, A: Davis, P; Davies, R.M.; Skelton, J; Stevens, K.; A; Huthors: Parry, C; Quail, M.; Rutherford, K.; Simmonds, M.; Skelton, J; Stevens, K.; A; Title: Complete genome sequence of a multiple drug resistant Salmonella enterica serov A; Reference number: AB0502; MUID:21534947; PMID:11677608
A; Accession: AE0595
A; Status: preliminary
A; Molecule type: DNA
A; Residues: 1-352 < PAR>
A; Cross-references: GB:AL513382; PIDN:CAD05231.1; PID:g16502001; GSPDB:GN00176
C; Genetics:
A; Gene: STY0816
C; Superfamily: molybdenum transport protein modC; ATP-binding cassette homology
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       C;Species: Drosophila melanogaster

This antibody is directed against a human Factor VIII inhibitory antibody directed rowards the C2 domain of Factor VIII. The anti-idiotypic antibody is characterized by having the capacity to neutralize by at least 50% the inhibition of FVIII procoagulant activity mediated by inhibitory antibodies against the C2 domain of FVIII. The anti-idiotypic antibodies of the invention may be used to treat, prevent or reduce bleeding disorders of haemophilia patients, or to induce apoptosis of B cells carrying anti-C2 inhibitory antibodies in a haemophilia patient.
                                                                                                                                                                                                                                                                                                                                                                                               mouse, anti-idiotypic antibody; 14C12; Factor VIII inhibitory antibody; C2 domain, Factor VIII; procoagulant; bleeding disorder; haemophilia; B cell apoptosis; antibody; heavy chain; CDR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New monoclonal anti-idiotypic antibodies against human Factor VIII inhibitory antibodies, useful for treating or preventing bleeding disorders of hemophilia patient.

g or treating diseases associated with metalloproteases, e.g., cystic fibrosis, metabolic disorders, cardiovascular disorders
                                                                                                                                                                                                                                                                                                                                                                                       choriolysin/astacin-like metalloprotease; respiratory disorder; emphysema; cystic fibrosis; metabolic disorder; oardiovascular disorder; bacterial infection; hypertension; proliferative disorder; cancer; aucoimmune; inflammatory disorder; rheumatoid arthritis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             INSP005B. This protein is a metalloprotease, specifically a choriolysin/astacin-like metalloprotease. The INSP005 polypeptides and nucleic acid molecules of the invention are useful in the therapy or diagnosis of diseases or in the manufacture of a medicament for the treatment of a disease, such as a respiratory disorder, including emphysema and cystic fibrosis, a metabolic disorder, a cardiovascular disorder, a bacterial infection, hypertension, a proliferative disorder, including cancer, an autoimmune/inflammatory disorder, including rheumatoid arthritis, a neurological disorder, a developmental disorder, a reproductive disorder or other pathological condition in which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                neurological disorder; developmental disorder; reproductive disorder
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     metalloprotease proteins (INSPOO5a or INSPOO5b) for diagnosing,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence represents a fragment of a new secreted polypeptide,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   8; Length 27;
